AMENDMENT

(U) In response to the Office Action dated October 30, 1979,
please amend herein as follows:

In the Claims

- 1 (C) 1. (Amended) A delay measurement circuit comprising:
2 first and second channels for receiving first and second
3 signals, each of said signals having a leading edge and a
4 trailing edge;
5 a leading edge circuit coupled to said first and said
6 second channels for signaling the temporal relationship of
7 the leading edges of said first and said second signals;
8 a trailing edge circuit coupled to said first and said
9 second channels for signaling the temporal relationship of
10 the trailing edges of said first and said second signals;
11 a memory coupled to said leading edge circuit for storing
12 data of said leading edges;
13 timing means activated by said leading edge circuit for
14 measuring a delay between leading edges of said first and said
15 second signals; [and]
